

Connecting Your Supply Chain

At the heart of your business is your Supply Chain – how you move your products or services from your supplier(s) to your customers.

Supply Chains that are effective and dynamic are particularly important in the FMCG sector – high volume, fast turnover and frequently purchased goods require procurement, forecasting, planning and customer service logistics that are well connected.

The **Supply Chain Practitioner** level 3 apprenticeship qualification will help your supply chain team prioritise the flow of products/services, lead and participate in everyday problem solving activities and develop/manage project plans within your Supply Chain function to improve your business operational performance.

Some of the key areas covered by this program:

- Critical Supply Chain KPIs
- IT Systems for Supply Chain
- Key principles of Continuous Improvement
- Principles of Capacity Planning
- Principles of Buying
- Forecasting – levers and influencers
- Plan Manufacturing principles
- Delivering excellent customer service
- Logistics – cost, impact of short lead times
